**Daily Coding Problem**

Good morning! Here's your coding interview problem for today.

This problem was asked by Snapchat.

Given an array of time intervals (start, end) for classroom lectures (possibly overlapping), find the minimum number of rooms required.

For example, given [(30, 75), (0, 50), (60, 150)], you should return 2.

Ready to interview? [Take Triplebyte's quiz](#) and skip straight to final interviews with top tech companies!
